

Working together to improve the health of the public

The PhD in Nursing and Healthcare Innovation

teaches students to conduct collaborative interdisciplinary research on the most critical health challenges of our time. Our graduates are the next generation of visionary research leaders, transforming health by promoting discoveries, generating knowledge with purpose, and applying it to better health outcomes.

Program details:

- An 84 credit, hybrid-format, interdisciplinary doctoral program.
- Interprofessional program ideal for students with a background in nursing or related fields.
- Funding available through fellowships, scholarships, grants, and the Nurse Faculty Loan Repayment Program.

Your Faculty. Your Research.

Faculty engagement is one of the hallmarks of our PhD program. Our world-renowned faculty mentors provide personal guidance as you develop competencies in three core areas vital to this PhD: collaborative inquiry, scholarly citizenship and societal leadership.

Research Focus Areas:

Whether your goal is becoming a leader in health research, education, or policy, our faculty create a supportive, collaborative environment for both BS to PhD and MS to PhD students to pursue scientific discovery in topics that include:

- Health Promotion and Disease Prevention
- Aging and Resiliency
- Innovative Health Interventions

Priority application deadline is December 15

Applications considered on a rolling basis thereafter.
